- Current symptoms and treatment goals
- Complete medical and psychiatric history
- History of substance use or dependence
- Current medications and supplements
- Previous anxiety or medical treatments
- Allergies or underlying health concerns
- Other relevant medical conditions

People considering Valium should answer medical questions accurately because healthcare professionals use this information to determine whether the medication is appropriate.

Telehealth consultations can help providers identify potential risks before prescription treatment is considered.

Doctors may consider:

- Severity of anxiety symptoms or underlying condition
- Existing medical and psychiatric conditions
- Current medications
- Substance use history
- Potential medication interactions
